## **DETAILED ACTION**

### ***Election/Restrictions***

1. The restriction requirement, mailed 3 October 2003 is withdrawn.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 8-52, drawn to a method of controlling a flow controller, classified in class 700, subclass 282.
  - II. Claims 53-82, drawn to an arrangement for controlling the flow of fuel into an internal combustion engine, classified in class 123, subclass 90.11.
  - III. Claims 83-90, drawn to an arrangement and method of actuating a valve, classified in class 251, subclass 129.05.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require defining a duration of the time window so that the current flowing through the consumer during the time window does not exceed a threshold value. The subcombination has separate utility such as a method of controlling a fuel injector.
4. Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the

Art Unit: 3754

subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require a determining arrangement to determine within a time window a switching instant and also to define a duration in the time window so that the current flowing through the consumer during the time window does not exceed a threshold value. The subcombination has separate utility such as an arrangement to control a fuel injector.

5. Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the process can be practiced with a product that does not have a control arrangement to control a switching arrangement.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and because the search required for one Group is not required for the other Groups, and because these inventions have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 3754

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
